LAB 4 EXERCISE SHEET

Q1: Implement algorithms for storing and retrieving lower triangular sparse matrix as discussed in lab. Attach code and output.

Q2: Find the size of U for a tridiagonal matrix B. Find the formula for L if U[L] = B[J][K].

Q3: Develop and implement an algorithm to store non-zero entries of B in U. Attach code and output.

Q4: Develop and implement an algorithm to retrieve B from U. Attach code and output.
